Metals (Cd,Ni,Pb,Cu,Zn,Cr,Hg) and microbiological concentrations are given on a perfectly dry mass of the sample.

Agrochemical characteristic concentrations are given in the moist sample mass.

^x given uncertainty of the measurement is the expanded uncertainty- calculated, using covering coefficient 2, which ensure 95% level of confidence.

Results under the method detection limit (MDL) are given with the symbol <. The number after the symbol is equal to the MDL.

* The result is between the MDL and the limit of quantitation (LQ). The uncertainty in this interval can reach 50%.

°the test method is outside of the field of laboratory accreditation.

Test results relate only to the tested samples!

Sampling is carried out by the customer.
